

INTRODUCTION

We are going to propose a software on a pharmaceutical company intro and product list of that pharmaceutical .Bangladesh has become a largest pharmaceutical product producer country .So we need to create more attachment with modern software in this sector. From this point of view we have decided to make a software where a company introduction and product list of that company will be added.

Objective (Company Intro and Product details):

This system software does not mean drug house products management tools. It will be created on the basis of a significant pharmaceutical company product list. It will help a pharmaceutical company to show their product in details .If they want to give presentation about their product then it will help them a lot. Moreover there have some different sections in this tools where new arrival product will be displayed and also a section for giving some information about that company. Also we will attach some information about that companies referred doctor and their opinion. Consistent development process will make it more useful. Moreover this software will convert into mobile app with same feature so local user also get service from here.

Feasibilities:

- Company will get opportunity to advertise their products
- Local people will get knowledge about company and company product
- This software also will be helpful for doctors advertisement
- It will create good attachment between company , local people and doctor

Issues:

We may follow some difficulties because lack of knowledge but we will try our best to cover it by the discussion with some expert person.

Requirements:**Knowledge requirement:**

We need some knowledge about pharmaceutical companies product .then we need some knowledge about generic of product and we need to know well about products activities and criteria. Moreover we need all the information of their marketing policy also need to know about their referred doctor and their opinion.

Software requirement:

- Java Fx , JDK ,SQL
- Android Studio

Hardware requirement:

- Laptop or Pc
- Android phone

Project Scheduling :

Analytical Steps :

Activity	Description	Precedence	Time in weeks
1	Knowledge specification on project (with specification)	none	2 weeks
2	Knowledge specification on project (with local people)	1	1 week
3	Requirement gathering	1,2	1 week

Planning and Construction :

Activity	Description	Precedence	Time in weeks
4	Project Initiative	3	1 week
5	System Design	4	1 week
6	UI on UX	4 , 5	1 week
7	Database Design	5	2 weeks
8	Coding	6 , 7	4 weeks

Deployment :

Activity	Description	Precedence	Time in weeks
9	Testing	6,7,8	2 weeks
10	Releasing	9	1 week

Our Concern:

We will take 100 % liability if their will occur any bug at running software
.We also give them initial support of training for controlling this software
