**Introduction :**

We have already showed a report on our proposed project and completed knowledge gathering steps. Now we are going to present Data flow diagram of our project. This is divided into two part first one is context level which show full process in short flow chart view and then details of our data flow diagram in level 0.

Our System : A Pharmaceutical Company Intro and Product details.

Symbols we need :Data flow , Entity , Process , Data Store.

Context Level :

This level shows the relation between user and application with bidirectional connectors which indicates the existence of information exchange between user and application.

DFD level 1 :

Here entity is user, company and product is stored data and level is the process of this data flow diagram

Level 1.0 denotes promotion process to the user. A customer can show company history, features from here.

Level 1.1 will show the search products result when user appears to find the product details with name and then 1.2 will show all product details to the user.

Level 1.3 denotes a user can able to show some doctors view and their details which is referred by the company.

Finally 1.4 means when a customer need to check the contact and address details of the company they will find it using contact section from here.
